

Simone Messina *Curriculum vitae*

Date of birth: 01/01/1987

Place of birth: Rome

Nationality: Italian

Sex: Male

E-mail address: simone.messina87@gmail.com

Mobile phone: +32485056129 / +393295429274

Education and Activities

25th of March 2014: Master degree in Eco-biology at the University of Rome “La Sapienza”. Thesis title: “Distribution and trophic ecology of the otter *Lutra lutra* in Albania”. Final result: 110/110 cum laude (highest honors).

01/04/2014 – 31/03/2015: I have collaborated with the Civil National Service at the protected area Riserva Naturale Monti Navegna e Cervia (RI), Rieti (Italy). I was involved in the activity of monitoring of the species *Canis lupus* (photo trapping, wolf howling); *Aquila chrysaetos* (scoring at nest); *Bombina pachypus* (ventral pattern and morphometric measurements).

01/10/2015 – 31/09/2016: I worked in the “Behavioral Ecology and Ecophysiology Group” at the Department of Biology, University of Antwerp. I conducted an experimental study on the effect of oxidative stress on the song behavior of male

starlings. I also participate to field work for a project on stress and herpes infections in the frigatebird (*Fregata magnificens*) in French Guiana.

Ongoing: the first of October 2016 I started my Phd in the “Behavioral Ecology and Ecophysiology Group” at the Department of Biology, University of Antwerp. The title of my project is “Physiological stress as a mechanism underlying the effects of forest logging on tropical birds: an experimental approach”.

Personal Interest

I am mostly interested in studying the physiological mechanism underlying the behavioral response of animals. In particular, I am fascinated by the study of oxidative stress because it can provide relevant information to better understand the life-history evolution, the animal communication, and response of individuals and populations to environmental changes and other stressors.

Lab Skills

Techniques to measure oxidative damage compounds and antioxidant capacity in plasma: the **Cayman’s TBARS** assay to measure lipid peroxidation, the **d-ROMs** assay to assess hydroperoxides, the **Protein Carbonyl Colorimetric** assay to determine protein carbonyls and the **OXY-adsorbent** assay to measure the non-enzymatic antioxidant capacity.

Grants

01/10/2015 – 31/10/2016: Recipient of the “Borsa di Perfezionamento all’Estero” released by the University of Rome “La Sapienza”.

01/10/2016 – ongoing: Recipient of the PhD Fellowship released by FWO (Fonds Wetenschappelijk Onderzoek - Flanders).
